Electronics & CS undergraduate skilled in full-stack development, deep learning, and AI systems — with hands-on experience building production-grade Python backends, React frontends, and ML pipelines. Eager to contribute to cutting-edge engineering teams working on autonomous systems, GPU platforms, and intelligent software tooling.

EDUCATION

Ramdeobaba College of Engineering and Management — B.Tech, Electronics & Computer Science Aug 2023 – May 2027
CGPA: 8.28 / 10 | Nagpur, India

Lord's Public Junior College — Class 12th July 2021 – April 2023
75.68 % | MH-CET Percentile: 94.5% | Nagpur, India

TECHNICAL PROJECTS

AI Skincare Analysis System | TensorFlow · FastAPI · React · EasyOCR · OpenCV · Python 2025 – 2026

- Built a deep learning system to classify skin type (oily/dry/normal/combination) using an **EfficientNetB0 CNN** with test-time augmentation (10× crops) and temperature-scaled calibration ($T=1.2$).
- Built **automated API testing** workflows using Postman — validated FastAPI endpoint behaviour, edge cases, and regression scenarios across the `/predict-skin` and `/analyze-ingredients` endpoints.
- Developed an adaptive hybrid fusion algorithm: CNN entropy-based confidence weighting + rule-based questionnaire scoring → deployed via FastAPI backend and React frontend.

FitGlow Website | React.js · Spring Boot · SQL · RESTful APIs · Java 2025

- Developed a full-stack web application using React.js frontend and Spring Boot backend with MVC architecture.
- Designed and implemented RESTful APIs for client-server communication; performed API validation and integration testing using Postman.
- Integrated SQL database (MySQL/PostgreSQL) for persistent data storage; implemented CRUD operations with input validation and error handling.
- Applied object-oriented design principles to ensure modular, scalable, and maintainable code structure.

GetHired | Full-Stack Career Path & Gap Analyzer | React.js · Spring Boot · Java · PostgreSQL · REST APIs · JWT 2025

- Architected a full-stack web application using **React.js (Vite)** and **Java Spring Boot** with secure RESTful APIs and **JWT authentication** for reliable user session management.
- Engineered a client-side **PDF parsing engine** (pdfjs-dist) to extract text and execute **Gap Analysis** against role-specific skill matrices (SDE, DevOps, AI/ML), auto-generating tailored learning roadmaps.
- Integrated **GitHub and LeetCode REST APIs** via Spring RestTemplate to fetch real-time developer metrics and compute an automated **reliability score** based on open-source contributions; built an interactive **DSA dashboard** with Recharts to visualize progress against FAANG benchmarks.

ACHIEVEMENTS & LEADERSHIP

Patent Filed: Patent ID: 440362-001 | Ramdeobaba University | Mar 2025 — Proximity Sensor Based Welcome Display Device. Built a real-time embedded system integrating proximity sensor input with microcontroller-driven display triggering.

Hackathon Participant: WCE Hackathon 2026, Smart India Hackathon (SIH) — developed and tested software solutions under tight deadlines.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C++ (basic)

AI / ML Tools: TensorFlow / Keras, OpenCV, Hugging Face (Transformers), LangChain (basic), OpenAI API, EasyOCR, MTCNN, EfficientNet

QA & Testing: Test case design, Test plan creation, API testing (Postman), Regression testing, Automated testing workflows, Software validation

Frameworks & Technologies: Spring Boot, FastAPI, React.js, RESTful API Development, MVC Architecture, HTML, CSS

Developer Tools: GitHub, GitHub Actions (CI/CD), Docker, Linux (Ubuntu), Visual Studio Code, Postman, IntelliJ IDEA

Databases: SQL, MySQL, PostgreSQL, NoSQL (MongoDB basics), Relational & Non-relational Databases, Database Design

Core Competencies: DSA, OOP, Operating Systems, DBMS, AI, ML, Deep Learning, NLP, Analytical Thinking, Problem Solving
